BC Geological Survey

Type of Report: Technical Work / Archeological Impact Assessment

Total Cost: $1569.08

Author(s): Kevin Stewart

Notice of Work Permit Number(s)/Date(s): 5470712 / 2013/OCT/04

Year of Work: 2013

Statement of Work - Cash Payments Event Number(s)/Date(s): Ck# 3197 $1100.00, Ck# 3224 $469.08

Property Name: Creekrock

Claim Name(s) (on which the work was done): Creekrock

Commodities Sought: N/A

Mineral Inventory Minfile Number(s), If Known:

Mining Division: Fort Steele

Latitude: 49° 4' 15" Longitude: 114° 14' 42"

(at centre of work)

Owner(s):
1) Kevin Stewart 2) 

Mailing Address:
Box 237, Big Valley, Alberta, T0J 0G0

Operator(s) [who paid for the work]:
1) Kevin Stewart 2) 

Mailing Address:
Box 237, Big Valley, Alberta, T0J 0G0

Property Geology Keywords (lithology, age, stratigraphy, structure, alteration, mineralization, size and attitude):

Archeological Impact Assessment on the Creekrock Property

Fort Steele Mining Division
Tenures 592925, 592926

BCGS 082G.009
49° 4' 15"N 114° 14' 42"W

Owner: Kevin Stewart
Operator: Kevin Stewart
Author: Kevin Stewart
Date: August 14, 2014
Introduction

- The Mark Property is being examined for dimension stone. It is located in South East Rocky Mountains. It is located 76 kilometres Southeast of Fernie, BC. The claims are located at about 109 km on the Kishinena Forest Service Road east of the Flathead Valley. There is road access to the property.
History of Property

The property definition, any history of the property, current owner, operator, brief economic assessment

For each type of work, a list of claims including tenure numbers on which work was actually performed

The property was originally acquired by Roy Davidson then purchased by Kevin and Eldon Stewart. Legacy claim was lost by forfeiture and then re-staked by Kevin Stewart the present owner and operator.

The intent was to harvest colorful stones for use and sale.

In 2010 the “Flathead Watershed Area Order” came into effect and I was contacted to inform me that mining would no longer be allowed in this area and I was to submit an assessment of sunk costs that I would be compensated for. I did so and moved the trailer and storage container off the property.
After doing so I was informed that after closer examination of the wording in the order by BC government lawyers that I would be allowed to continue because my operation was less than two hectares and removing less than 20,000 tonnes per annum.

Because I had already moved off the property I was compensated for moving expenses and told I could move back to the property and would be compensated to move back, which I was.

After moving back I constructed a temporary structure on skids for sleeping etc. while at the claim.

In October 2012 I was issued a “Trespass Notice” and ordered to remove everything from the property or risk seizure of property, fines and even jail time.

I was then told by the mines department that if I had an active mining permit that the structures could stay. So I proceeded to go through the process of filling out the forms and was told that I would need an archeological study done before I could do any test holes.

An archeological study was done in August of 2013 by Tipi Mountain Eco-cultural Services Ltd.

After the archeological study was done my application for a mining permit was denied because no new mining permits were being issued in this area but I was told I could apply for a quarry permit for my property.

Not willing to spend any more time and money applying for permits etc., just to be denied I removed all structures from property without any compensation or penalty.

Work Performed in 2013

An archeological study was done in August of 2013 by Tipi Mountain Eco-cultural Services Ltd for the purposes of satisfying a mine permit application.

I accompanied the two workers from Tipi Mountain during their walk around the property.
Regional Geology

The area has been mapped as being underlain by Middle Proterozoic Purcell Supergroup dolomitic carbonate rocks (Kitchener Formation) and volcanic rocks (Massey). There are nearby mineral occurrences in the Kishinema Creek area including the LIN 5 (082GSE012) in quartzites.

Local Geology

Describe the rock types found on the claims. Portions of the property appear to be covered in boulders and cobbles.

Statement of Costs

Tipi Mountain invoice: 2 workers for 8 hours plus vehicle and gear $1070.10

Preparing Letter of Notice $320.00

Administration and report fees $104.26

Total $1494.36
Statement of Qualifications (Author’s Qualifications)

The Author of this report is Kevin Stewart of Big Valley, Alberta, Canada.

Kevin is the owner of mineral claims #592925 and #592926.

Kevin’s free minor certificate # is 211891.

Archaeological Impact Assessment (AIA) reports received and reviewed by the Geological Survey Branch that are found to be acceptable for exploration and development work credit will remain on file and kept confidential. If an AIA report is submitted as part of a larger technical assessment report, the section of the report pertaining to the AIA report will remain on file, kept confidential and excluded from the version of the report that is uploaded to ARIS.

Requests for a copy of an AIA report from Geological Survey Branch or Mineral Titles will be directed to the Archaeological Branch at Ministry of Forests, Lands and Natural Resource Operations.
